

JUNGLE KABAL v9.6 — 1-YEAR PROJECTED PERFORMANCE REPORT

DISCLAIMER: This is a **statistical projection** based on 2 live paper-trading sessions (51 total trades). It extrapolates observed win rates, P&L distributions, and trade frequencies over 365 daily sessions. **This is NOT a backtest against historical data.** Actual performance will vary due to market conditions, liquidity, volatility cycles, and PumpFun ecosystem changes. Past paper-trade results do not guarantee future performance.

Projection Basis

Source Data	Run #1 (2025-04-01) + Run #2 (2025-04-01)
Version	v9.6 (frozen tag: dd8be78)
Total Source Trades	51
Total Source Sessions	2
Avg Trades/Session	25.5
Avg Session Duration	~57 minutes
Projection Period	365 daily sessions (1 year)
Mode	Paper Trading (no real capital)

1-YEAR PROJECTED TOTALS

Metric	Projected Value
Total Sessions	365
Total Trades	~9,308
Total Wins	~3,468
Total Losses	~4,017
Total Timeouts	~1,823

Metric	Projected Value
Overall Win Rate	37.3%
Projected Annual P&L	-3,997%

Note: The heavily negative projected P&L is driven primarily by BRAVO's consistent underperformance (-52.1% avg per session). If BRAVO were disabled, projected annual P&L would be significantly improved. See Scenario Analysis below.

Per-Bot Annual Projections

ALPHA (BREAKOUT)

Metric	Per Session Avg	Annual Projected
Trades	3.5	~1,278
Win Rate	29%	29%
Avg Session P&L	+24.9%	—
Annual P&L	—	+9,089%
Fib Conversion	17%	17%
W / L / T	1.0 / 1.0 / 1.5	365 / 365 / 548

Analysis: ALPHA is profitable despite low win rate — large +79.0% Run #1 win carries the average. High timeout rate (43%) suggests many BREAKOUT entries fail to reach TP/SL within 30 minutes.

BRAVO (PUMP_PHASE)

Metric	Per Session Avg	Annual Projected
Trades	8.0	~2,920
Win Rate	25%	25%
Avg Session P&L	-52.1%	—
Annual P&L	—	-19,017%

Metric	Per Session Avg	Annual Projected
Fib Conversion	19%	19%
W / L / T	2.0 / 3.5 / 2.5	730 / 1,278 / 913

Analysis: BRAVO is the **worst-performing bot by a wide margin**. 25% win rate with TP at only +20% cannot overcome losses at -12% SL + 3% slippage. Losses compound rapidly. **Strong candidate for removal or major reconfiguration.**

CHARLIE (TRENDING)

Metric	Per Session Avg	Annual Projected
Trades	4.5	~1,643
Win Rate	56%	56%
Avg Session P&L	+12.5%	—
Annual P&L	—	+4,553%
Fib Conversion	18%	18%
W / L / T	2.5 / 2.0 / 0.0	913 / 730 / 0

Analysis: CHARLIE is the **most consistent bot**. Highest win rate (56%), zero timeouts, and the only bot profitable in BOTH sessions. Higher minScore (55 vs 45) filters out weaker setups. **Best candidate to increase position sizing.**

DELTA (NARRATIVE)

Metric	Per Session Avg	Annual Projected
Trades	9.5	~3,468
Win Rate	42%	42%
Avg Session P&L	+3.8%	—
Annual P&L	—	+1,370%
Fib Conversion	19%	19%
W / L / T	4.0 / 4.5 / 1.0	1,460 / 1,643 / 365

Analysis: DELTA takes the most trades (highest volume) with moderate win rate. Barely profitable on average — one bad session can erase multiple good ones. Vulnerable to extreme dumps (\$BARK -55.4% in Run #2 bypassed SL).

Monthly Projected P&L Breakdown

Month	Sessions	Trades	ALPHA	BRAVO	CHARLIE	DELTA	Combined
Month 1	30	765	+747%	-1,563%	+374%	+113%	-329%
Month 2	30	765	+747%	-1,563%	+374%	+113%	-329%
Month 3	30	765	+747%	-1,563%	+374%	+113%	-329%
Month 4	30	765	+747%	-1,563%	+374%	+113%	-329%
Month 5	31	791	+772%	-1,615%	+386%	+117%	-340%
Month 6	30	765	+747%	-1,563%	+374%	+113%	-329%
Month 7	31	791	+772%	-1,615%	+386%	+117%	-340%
Month 8	31	791	+772%	-1,615%	+386%	+117%	-340%
Month 9	30	765	+747%	-1,563%	+374%	+113%	-329%
Month 10	31	791	+772%	-1,615%	+386%	+117%	-340%
Month 11	30	765	+747%	-1,563%	+374%	+113%	-329%
Month 12	31	791	+772%	-1,615%	+386%	+117%	-340%
TOTAL	365	9,308	+9,089%	-19,017%	+4,553%	+1,370%	-4,005%

Note: Monthly figures assume uniform distribution. Real performance would show variance — some months significantly better or worse than average.

Scenario Analysis

Scenario A: All 4 Bots (Current Config)

Annual P&L	-3,997%
Win Rate	37.3%
Trades	~9,308
Verdict	 Not viable — BRAVO drags system deeply negative

Scenario B: Remove BRAVO (3 Bots)

Annual P&L	+15,012%
Win Rate	41.4%
Trades	~6,388
Verdict	 Highly profitable — removing BRAVO flips the system positive

Scenario C: CHARLIE Only (Best Bot)

Annual P&L	+4,553%
Win Rate	56%
Trades	~1,643
Verdict	 Safest configuration — highest win rate, most consistent

Scenario D: ALPHA + CHARLIE (Top 2)

Annual P&L	+13,642%

Win Rate	43.8%
Trades	~2,920
Verdict	✅ Best risk/reward — two profitable bots, moderate volume

Key Observations & Recommendations

- **BRAVO is the clear problem.** -19,017% projected annual loss. Its 20% TP cannot overcome the -12% SL + 3% slippage on a 25% win rate. Recommend **disabling or reconfiguring BRAVO** immediately.
- **CHARLIE is the star.** 56% win rate, zero timeouts, profitable in both sessions. Consider **increasing CHARLIE's position size** or **lowering its minScore** to capture more trades.
- **ALPHA is surprisingly strong** despite only 29% win rate — its +35% TP means wins are nearly 3x the size of losses. Classic asymmetric risk/reward.
- **DELTA is marginal.** High volume but thin edge (+3.8% avg). Vulnerable to tail-risk events (extreme dumps). Consider **tightening DELTA's entry criteria** or reducing position size.
- **Fib conversion rate is low (~18%).** 82% of tokens that enter the Fibonacci watchlist expire without triggering entry. This is the primary filter keeping trade quality high — do not loosen it.
- **Win rate needs to exceed ~40% at current TP/SL ratios** for consistent profitability. Only CHARLIE and DELTA meet this threshold.
- **Sample size caveat:** 51 trades across 2 sessions is a small sample. Confidence intervals are wide. Recommend **minimum 10 sessions (250+ trades)** before making strategy changes.

Risk Factors (Not Modeled)

Risk	Impact
Market regime change	Bull/bear cycles will shift win rates dramatically
PumpFun ecosystem changes	Token quality, volume, and dump patterns may evolve
Liquidity drying up	Slippage could exceed the modeled 3%
API/WebSocket downtime	Missed entries and stale prices

Risk	Impact
Extreme dump cascades	-55%+ losses that bypass SL (seen in Run #2)
Narrative exhaustion	DELTA relies on social momentum that may fade
Serial deployer adaptation	Spam creators may evolve to bypass detection

Strategy Configuration Reference (v9.6)

Bot	TP	SL	Min Score	Size	Max Pos	Timeout
ALPHA	+35%	-12%	45	0.5 SOL	8	30m
BRAVO	+20%	-12%	45	0.5 SOL	8	30m
CHARLIE	+20%	-12%	55	0.5 SOL	8	30m
DELTA	+30%	-12%	45	0.5 SOL	8	30m

Entry: Fibonacci retracement (0.382–0.500 zone) | **SL Slippage:** +3% on stops | **Age Filter:** <60m tokens only
