DELTA SPOTLIGHT — MVP OF THE DAY: +531.2% (+15.94 SOL)

DELTA emerged as the dominant force in this marathon session. With 49 trades at 45% win rate, DELTA generated more profit than all other bots combined. The NARRATIVE/ PUMP_PHASE strategy excelled at capturing explosive moves.

DELTA's Monster Trades:

Token	Entry	Exit	P&L	SOL	Hold	Result
\$RUBIA	\$0.00001093	\$0.00004070	+272.4%	+8.17 SOL	2.1m	TP

DELTA's worst losses: \$NOYMAR -82.6%, \$Shtibben -78.7%, \$Vape -52.3% — all SL blowouts from extreme dumps.

PER-BOT PERFORMANCE

Bot	Strategy	Trades	W / L / T	Win Rate	P&L	SOL P&L	Fib Conv.
ALPHA	BREAKOUT	62	30 / 29 / 3	48%	+273.2%	+8.20 SOL	62/300 (21%)
BRAVO	PUMP_PHASE	69	24 / 19 / 26	35%	+17.7%	+0.53 SOL	69/321 (21%)
CHARLIE	TRENDING	32	13 / 15 / 4	41%	-47.4%	-1.42 SOL	32/159 (20%)
DELTA	NARRATIVE	49	22 / 23 / 4	45%	+531.2%	+15.94 SOL	49/267 (18%)

ALPHA — THE VOLATILE KING: +273.2% (+8.20 SOL)

ALPHA posted the most trades (62) and highest win count (30). But it's a tale of two strategies — spectacular breakout wins countered by catastrophic SL blowouts.

ALPHA's Best Trades:

Token	P&L	SOL	Hold
\$dicky	+334.7%	+10.04 SOL	2.1m
\$STEVES	+226.5%	+6.80 SOL	3.9m
\$SQID	+192.6%	+5.78 SOL	2.8m
\$BONUPART	+88.0%	+2.64 SOL	3.1m
\$forward	+66.0%	+1.98 SOL	2.2m
\$Rubert	+50.8%	+1.52 SOL	2.3m
\$IRONINU	+49.9%	+1.50 SOL	0.1m
\$YUMEKO	+49.2%	+1.48 SOL	1.6m

ALPHA's Worst Blowouts (SL bypassed):

Token	P&L	SOL	Note
\$USRC	-96.4%	-2.89 SOL	Price collapsed to near-zero
\$WOJROCKET	-94.2%	-2.83 SOL	Instant rug-style dump
\$BARKSY	-88.7%	-2.66 SOL	SL blown through
\$CHUN	-84.2%	-2.53 SOL	Extreme dump
\$Rocketcoin	-82.9%	-2.49 SOL	SL ineffective
\$RICEK	-80.3%	-2.41 SOL	Same pattern
\$BARUCK	-80.4%	-2.41 SOL	Catastrophic
\$BELL	-79.7%	-2.39 SOL	Price to near-zero
\$Dicapriu	-79.8%	-2.39 SOL	SL blown
\$POTIN	-78.6%	-2.36 SOL	Rug dump

Critical finding: ALPHA's BREAKOUT strategy has a fundamental SL problem. 10 of its 29 losses exceeded -60%, with most hitting -78% to -96%. The -12% SL is completely ineffective when tokens dump to near-zero in a single candle. Despite this, ALPHA's

massive winners (\$dicky +334.7%, \$STEVES +226.5%, \$SQID +192.6%) still made it the #2 most profitable bot.

BRAVO — STEADY BUT DILUTED: +17.7% (+0.53 SOL)

BRAVO took the most trades (69) but 26 were timeouts — tokens that never hit TP or SL within 30 minutes. This timeout rate (38%) is the highest across all bots and sessions.

Wins: 24 trades averaging +28.3% per win **Losses:** 19 trades averaging -23.4% per loss

Timeouts: 26 trades averaging -4.1% each (slow bleed)

BRAVO's best: \$Trell +59.4%, \$Liquidify +35.3%, \$ufo +35.4% **BRAVO's worst:** \$Cow -49.0%, \$PvP -48.2%, \$CHOSEN -39.8%, \$  -40.6%

The PUMP_PHASE strategy is hitting TP reliably on wins, but the high timeout rate suggests many tokens are entering a sideways consolidation phase that neither triggers TP nor SL.

CHARLIE — THE UNDERPERFORMER: -47.4% (-1.42 SOL)

Charlie was the only bot to finish negative. With 32 trades (lowest volume), it struggled with SL blowouts on its losses.

Notable wins: \$FREG +30.4%, \$FORWARD +29.4%, \$ALLAH +29.3%, \$NOWORDS +21.7% **Notable losses:** \$Bitcuin -51.6%, \$hospitalface -44.9%, \$MONT -24.8%, \$FORWARD -23.2%

10	ALPHA	\$BELL	-79.7%	-2.39 SOL	1.1m

9 out of 10 worst trades are ALPHA. The BREAKOUT strategy enters tokens at higher price points, making it more vulnerable to rug-style dumps that bypass SL.

SESSION PATTERNS & INSIGHTS

Time-of-Day Performance

- **14:49–16:00 (First hour):** Mixed, bots calibrating — ALPHA hit -96.1% early on \$RONULDO but recovered
- **16:00–18:00:** Strong period — DELTA's \$MANIFEST +108.2%, ALPHA's \$turtles, \$BYTE wins
- **18:00–20:00:** ALPHA's worst period — \$USRC -96.4%, \$WOJROCKET -94.2%, \$BARKSY -88.7% back-to-back

- **20:00–22:00:** DELTA surged — \$RUBIA +272.4%, \$CAVEMAN +55.4%, \$egg +127.0%
- **22:00–22:56:** Mixed close — ALPHA's \$SQID +192.6% balanced by losses

SL Blowout Problem (Critical)

- 22 trades lost more than -40% (vs -12% SL target)
- 15 trades lost more than -60%
- Average loss when SL is bypassed: **-72.3%**
- These all share the same pattern: token price drops to near-zero in a single block, SL order never fills at the set price
- **This is the #1 priority to fix** — an order flow gate would prevent most of these entries

Timeout Analysis

- 37 trades ended as timeouts (17.5% of all trades)
- BRAVO had 26 timeouts (38% of its trades!)
- Average timeout P&L: -3.8% (slow bleed from entry slippage)
- Timeouts indicate sideways-moving tokens that waste capital for 30 minutes

Win Size vs Loss Size

- Average win: **+48.1%**
- Average loss: **-32.7%** (dragged up by SL blowouts)
- Average loss excluding blowouts (>-40%): **-17.8%**
- The system is profitable despite low-ish win rate because wins are larger than controlled losses — but SL blowouts erode this edge

RECOMMENDATIONS FOR NEXT SESSION

1. **Order Flow Gate** — Would prevent most -70% to -96% SL blowouts by detecting dump momentum before entry

2. **Reduce BRAVO timeouts** — Consider tightening the 30m timeout to 15m, or implementing trailing SL after 10m
 3. **DELTA position sizing** — DELTA's consistency makes it a candidate for higher allocation
 4. **CHARLIE evaluation** — Only negative bot across 5 runs cumulatively. Consider removing or reducing its allocation
 5. **ALPHA risk cap** — Cap max loss per trade at -30% with a hard exit, regardless of SL slippage
-

RISK NOTES

- **Paper trading only** — no real funds at risk
 - **Position size 3 SOL** — calculated from 0.5 SOL actual trades, scaled 6x for reporting
 - **Slippage simulated** at 3% on SL exits (but real SL blowouts far exceed this)
 - **8-hour unattended session** — longest run to date
 - Results include both favorable and unfavorable market periods
